Ah, Ah, Ah Choo!!

If you are like the 40 million Americans who shy away from the outdoors during the height of the growing season, you have likely tried every over-the-counter product on the market. Unfortunately, most products force your body to function in a way that is not natural, hence the many side effects associated with these products.

Why are Natural D-Hist and great tasting children's D-Hist Jr. different? While most products only mask the situation, our scientific formulation addresses the issue before it can become a concern, providing sinus and nasal passage support when you need it most.

The Natural in Natural D-Hist

Ortho Molecular Products' Natural D-Hist is formulated for maximum effectiveness, with carefully selected dosages of critical natural components to provide optimal support for nasal and sinus passageways.

Quercetin

A powerful natural flavonoid, quercetin has been shown to inhibit mast cell degranulation and its unfortunate consequences.

Stinging Nettle Leaf

Stinging Nettle components have been shown to block important enzymes within the arachidonic acid cascade as well as having proven their effectiveness in a single ingredient clinical trial.

Bromelain

A strong pineapple enzyme, bromelain has proven mucolytic properties. As such, bromelain supports normal mucosal tissue function and enhances the absorption of quercetin.

N-Acetyl L-Cysteine (NAC)

An amino acid that is also a natural mucolytic, NAC reduces the viscosity of mucus. Clinical studies have proven oral doses of NAC to be an excellent means to recharge cellular glutathione, a functional antioxidant.
